6. **Integration & Automation:**
   a. **Salesforce Integration:** Integrate with other systems such as ERP or e-commerce platforms to ensureseamless data flow.
   b. **Workflow Automation:** Automate repetitive tasks and processes to increase operational efficiency andreduce manual errors

**TASKS :**

1.Creating the Objects :

To Create an object:

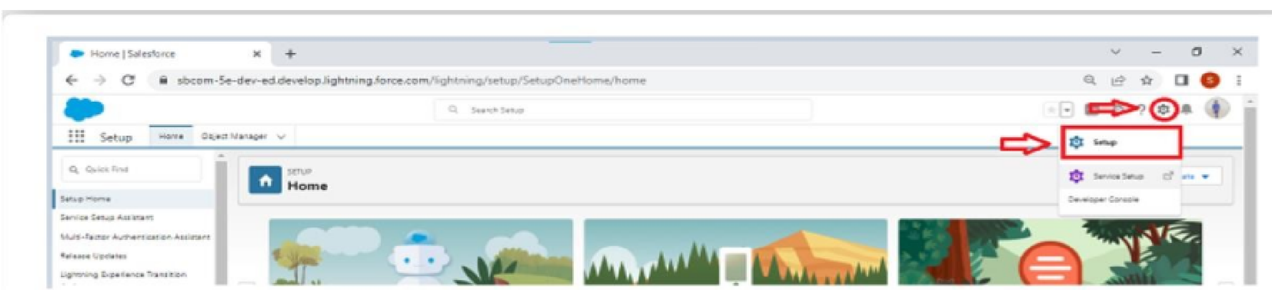
Creation of Objects for Urban Colour,  For this Urban Colour, we need to create three objects i.e .,Our Customers,Consultants,Retailers,others.

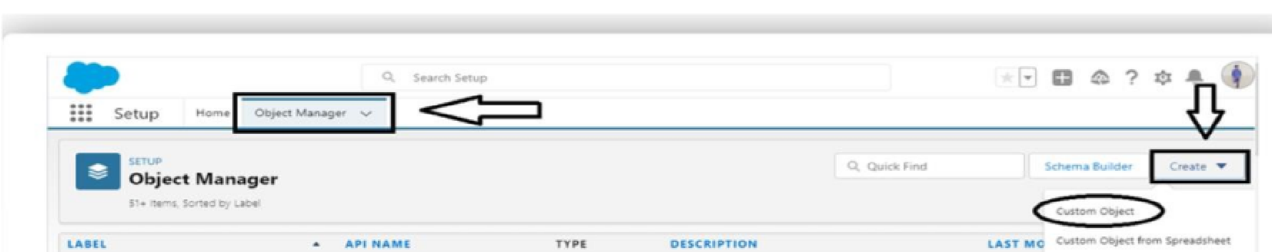
The below steps will assist you in creating those objects.

- Click on the gear icon and then select Setup.
- Click on the object manager tab just beside the home tab.
- After the above steps, have a look at the extreme right; you will find a Create Dropdown; click on that and selectCustom Object.
- Creation of Our Customer Object

On the Custom Object Definition page, create the object as follows:

- Label: Our Customer
- Plural Label: Our Customers
- Record Name: Our Customer
- Check the Allow Reports checkbox
- Check the Allow Search checkbox
- Click Save.
- Now create a custom tab. Click the Home tab, enter Tabs in Quick Find, and select Tabs.
- Under Custom Object Tabs, click New.
- For Object, select Our Customer.
- For Tab Style, select any icon.
- Leave all defaults as is. Click Next, Next, and Save.





We need to create four objects named Our customer, Consultant, Retailer, and Others.

For creating the another 3 objects, we need t follow the same procedure as mentioned above.After the completion of object creation task, We'll move on to further steps.

- **Task2 : Creating** Fields and Relationship:

An object relationship in Salesforce is a two-way association between two objects. Relationships are created by creating custom relationship fields on an object. This is done so that when users view records, they can also seeand **access related data.**

Fields in Our Customers objects :

Fields in Our Customers objects follow below data types:

| S No | Field Label | Data Type |
|---|---|---|
| 1 | Customer id | Auto Number |
| 2 | Customer Name | Text |
| 3 | Mobile Number | Phone |
| 4 | Email id | Email |
| 5 | Address | Text Area |
| 6 | Additional Information | Text Area |

**Fields in Consultants objects:**

Fields in Consultants objects follow below data types:

| S No | Field Label | Data Type |
|---|---|---|
| 1 | Customer id | Auto Number |
| 2 | Customer Name | Text |
| 3 | Mobile Number | Phone |
| 4 | Email id | Email |
| 5 | Delivery Type<br>1)Self Pickup<br>2)Courier | Picklist |
| 6 | Products<br>1)Lipstick | |

| | | |
|---|---|---|
| | 2)Compact<br>3)EyeLiner<br>4)FacePack<br>5)Lip Balm<br>6)Nail Polish | Multi-Picklist |
| 7 | Payment<br>1)Debit Card<br>2)Credit Card<br>3)UPI<br>4)Cash | Picklist |
| 8 | Customer details | Lookup(Our Customers Object) |
| 9 | Address | Text Long |

**Fields in Retailers objects:**

Fields in Retailers objects follow below data types:

| S No | Field Label | Data Type |
|---|---|---|
| 1 | Customer id | Auto Number |
| 2 | Customer Name | Text |
| 3 | Mobile Number | Phone |
| 4 | Email id | Email |
| 5 | Delivery Type<br>1)Self Pickup<br>2)Courier | Picklist |
| 6 | Products<br>1)Lipstick<br>2)Compact<br>3)EyeLiner<br>4)FacePack<br>5)Lip Balm | Multi-Picklist |
| | 6)Nail Polish | |
| 7 | Payment<br>1)Debit Card<br>2)Credit Card<br>3)UPI<br>4)Cash | Picklist |
| 8 | Customer Details | Master-Detail Relationship (Our Customers Object) |

**Fields in Others objects:**

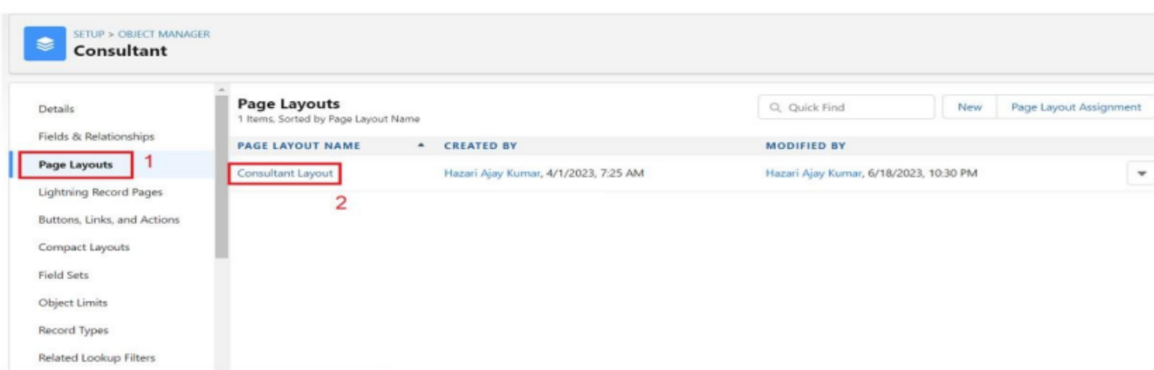
Fields in Other objects follow below data types:

| S No | Field Label | Data Type |
|---|---|---|
| 1 | Name | Text |
| 2 | Employee<br>1)Company Employee<br>2)Staff<br>3)Special Reference | Picklist |
| 3 | Coupon | Text |
| 4 | Products<br>1)Lipstick<br>2)Compact<br>3)EyeLiner<br>4)FacePack<br>5)Lip Balm<br>6)Nail Polish | Multi-Picklist |

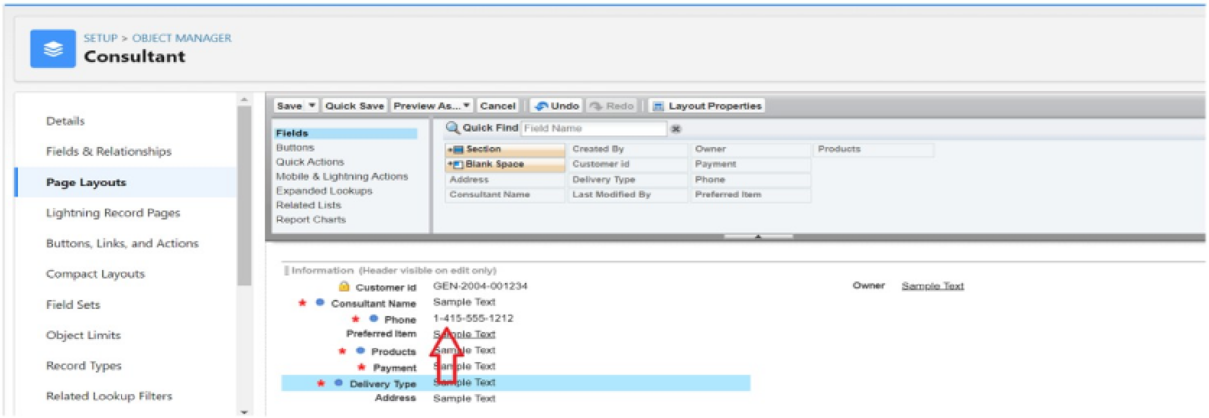
In the Cosmetic Store Management System built on Salesforce, fields and relationships are designed to streamline operations and enhance data management. Key fields include customer details (e.g., contact information and purchase history), product specifics (e.g., SKU, price, and inventory levels), order details (e.g., order status and shipping info), marketing campaign attributes, and case management elements. Relationships are structured to connect these fields efficiently: customers can have multiple orders and cases, each order can include multiple products, and products are linked to inventory and suppliers.

**<u>Task 3: Page Layout creation :</u>**

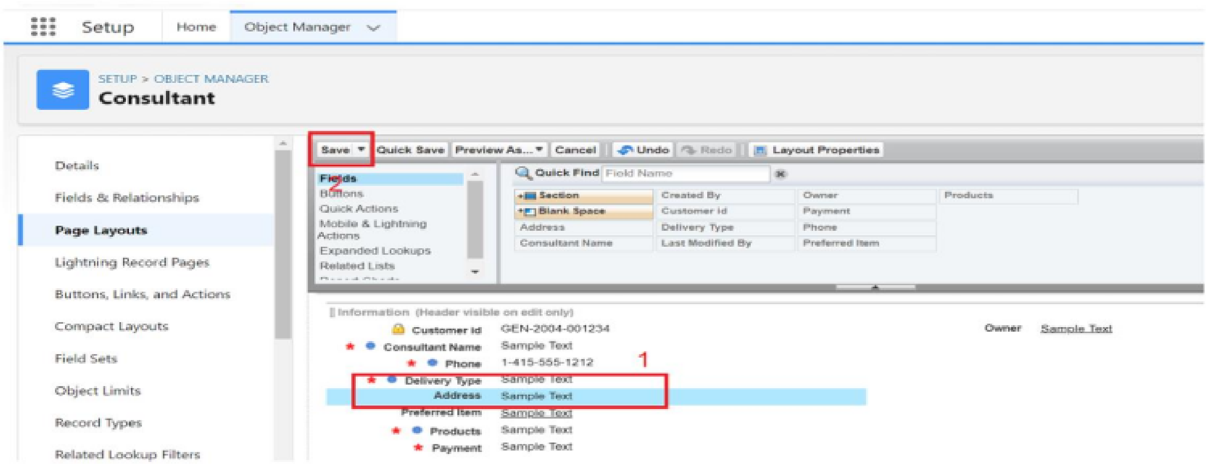
1. From the Salesforce setup menu, go to "Object Manager" and select the Consultants object.
2. Click on "Page Layouts" in the left sidebar. This will display a list of available page layouts for the selected object.
3. Select the Consultant Layout page layout.



4. Click And Drag Delivery type and Address Fields Below the Phone field.



5. Click on Save.

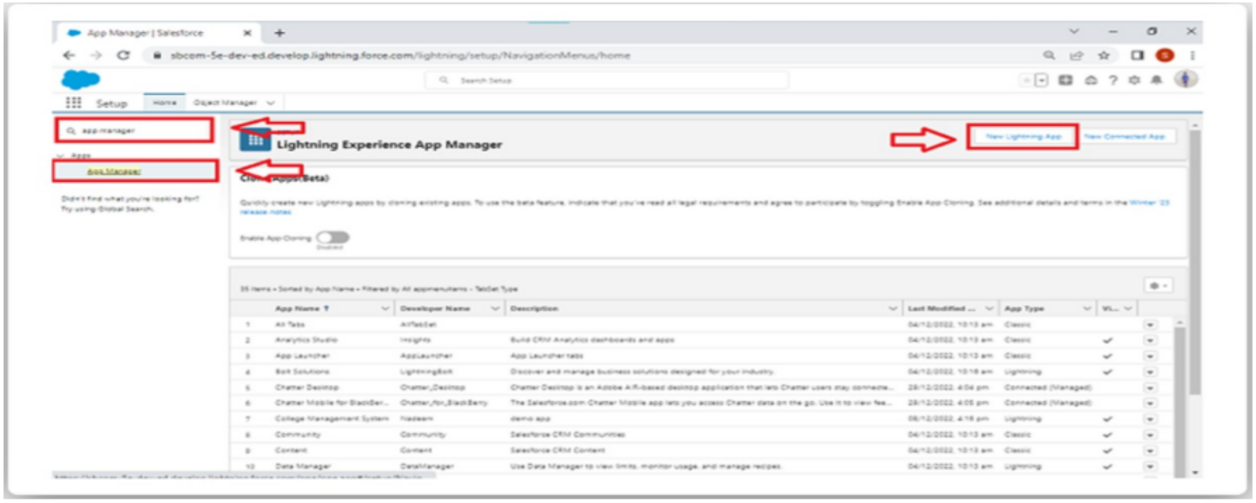


Creating a page layout in Salesforce involves navigating to the object manager, selecting the relevant object, and either creating a new layout or editing an existing one. You can design the layout by dragging and dropping fields,adding sections and related lists, and including buttons or links as needed. Customize field properties and section settings to suit user needs, then save and assign the layout to specific profiles or record types. Finally, preview and test the layout to ensure it is functional and meets user requirements.

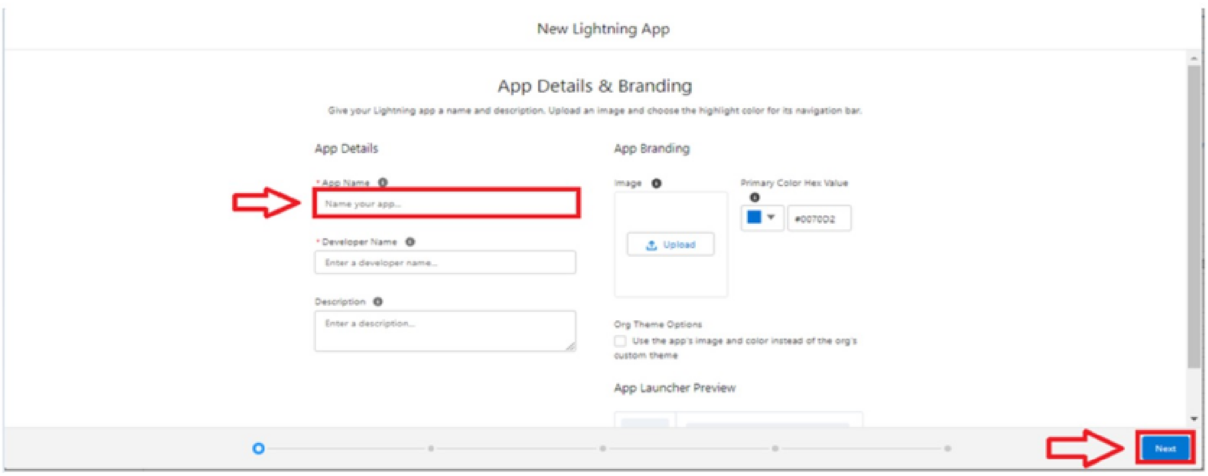
➤ **Task 4 : Creation of a Lightning App :**

- An app is a collection of items that work together to serve a particular function. In Lightning Experience, Lightning apps give your users access to sets of objects, tabs, and other items all in one convenient bundle in thenavigation ba**r**
- To create a lightning app page:

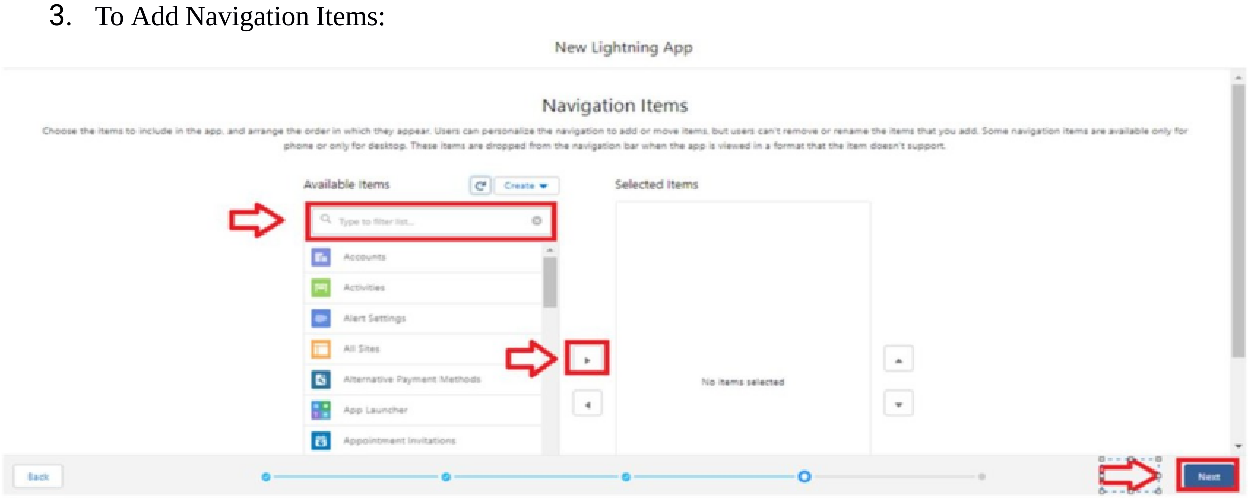
1. Go to the setup page --> search “app manager” in quick find --> select “app manager” --> click on New lightning App.



2. Fill the app name as Urban Colour in app details and branding --> Next --> (App option page) keep it as default --> Next --> (Utility Items) keep it as default --> Next.

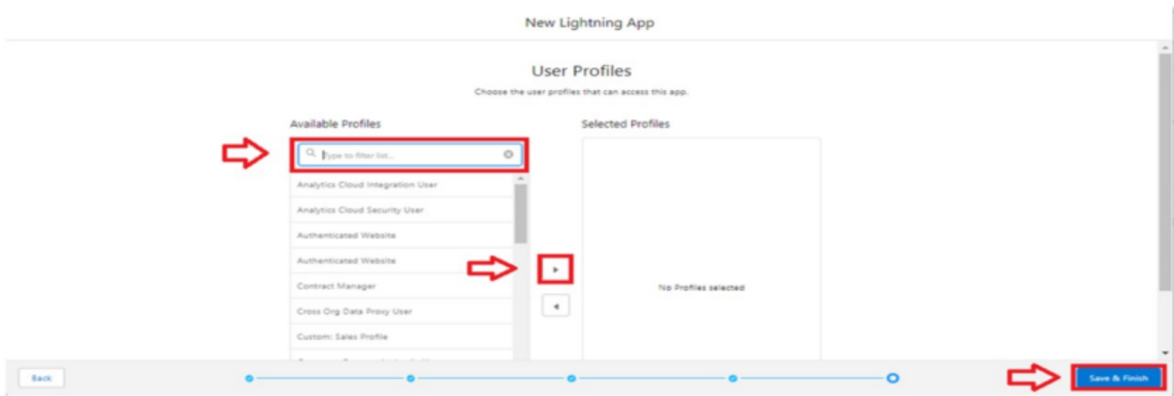


3. To Add Navigation Items:



4. Select the items (Our Customers,Consultants,Retailers,Others,Reports,Dashboards) from the search bar and move themusing the arrow button --> Next.

5. To Add User Profiles:



6. Search profiles (System administrator) in the search bar --> click on the arrow button --> save & finish.

➤ **<u>Task 5: Creating Profiles :</u>**

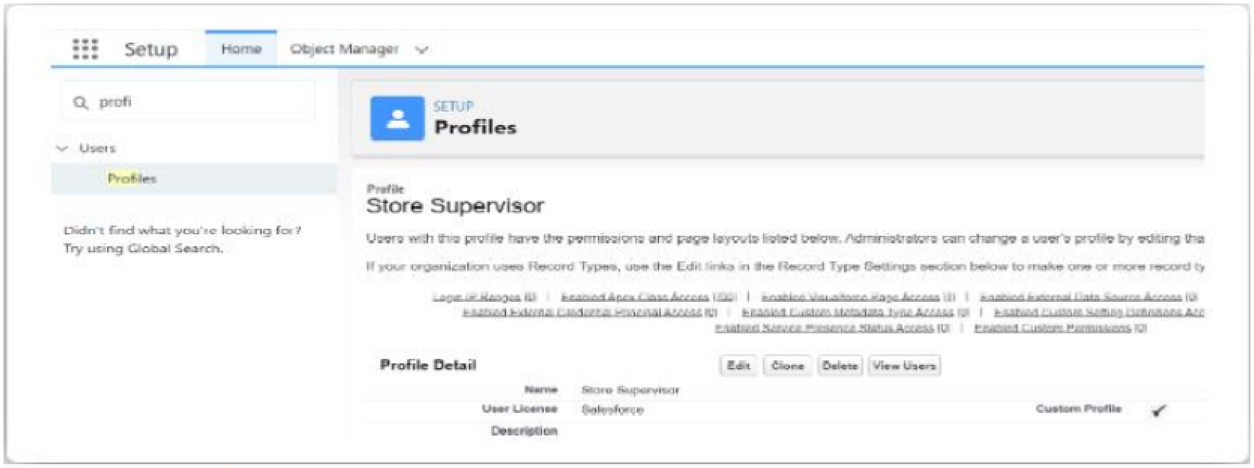
A profile is a group/collection of settings and permissions that define what a user can do in salesforce. A profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access,Visual-force page access, Page layouts, Record Types, Login hours & Login IP ranges.

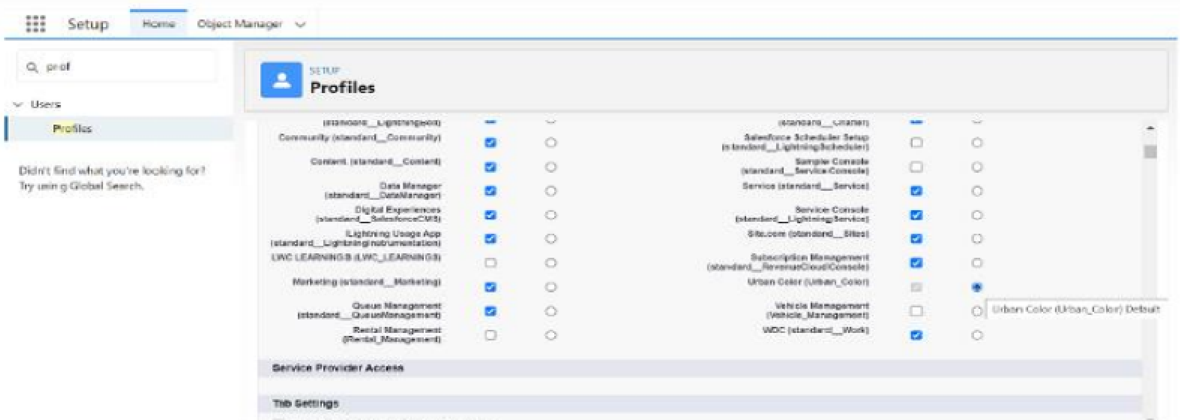
Creating a Profiles: Now create a Store Supervisor profile and set its object permissions.Creating a Profiles:

Now create a Store Supervisor profile and set its object permissions.

- From Setup, enter Profiles in the Quick Find box and select Profiles.
- From the list of profiles, find Standard User.
- Click Clone.
- For Profile Name, enter Store Supervisor.
- Click Save.
- While still on the Store Supervisor profile page, then click Edit.
- Scroll down to Custom Object Permissions and give access for Create,Read,Edit,Delete,View all, and modify all forOur Customers,Consultants,Retailers,Others.
- Scroll down to Custom App Settings and give access for Urban Colour.To create a new profile:

1. Go to setup --> type profiles in the quick find box --> click on profiles --> clone the desired profile (standard user ispreferred) --> enter profile name --> save.
2. While still on the profile page, then click Edit.



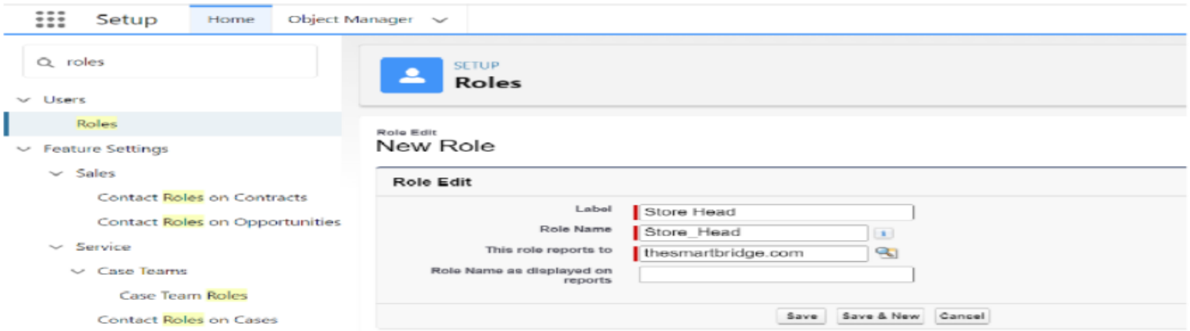


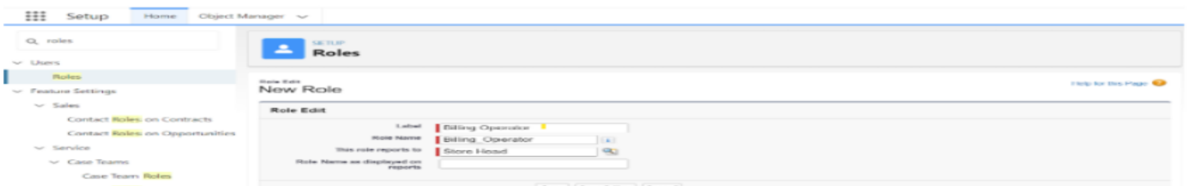
3. Scroll down to the Custom object permission and give all access to the Consultants, Others, Our Customers, and Retailers object.
4. Click on Save.
5. Similarly, Create an operator profile, Clone Salesforce Platform user, and give access only to Billing Operator.

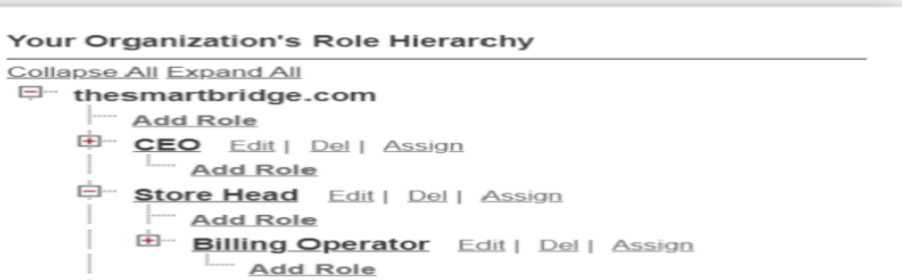
**Task 6: Setting up Roles :**

Roles are record-level access controls that define what data a user can see in Salesforce.

1. Click on the Gear Icon
2. Click "Setup"
3. In the Quick Find box, enter "Roles"
4. Click "Roles"
5. Click on "Set Up Roles"
6. Click "Expand All"
7. Under the Chief Executive Officer, click on "Add Role"
8. Fill up the Label as Store Head, Role Name Store_Head.
9. Enter a Role name that will be displayed on Reports.







In Salesforce, roles define the hierarchy and access levels for users within an organization. Roles determine the visibility of records and data sharing based on an employee's position and responsibilities. By establishing a rolehierarchy, Salesforce allows users to access and manage records owned by users in roles below them in the hierarchy. This ensures that managers can oversee the work of their subordinates while maintaining data securityand privacy. Roles are crucial for configuring access controls, enabling effective data sharing, and facilitating proper reporting within Salesforce.

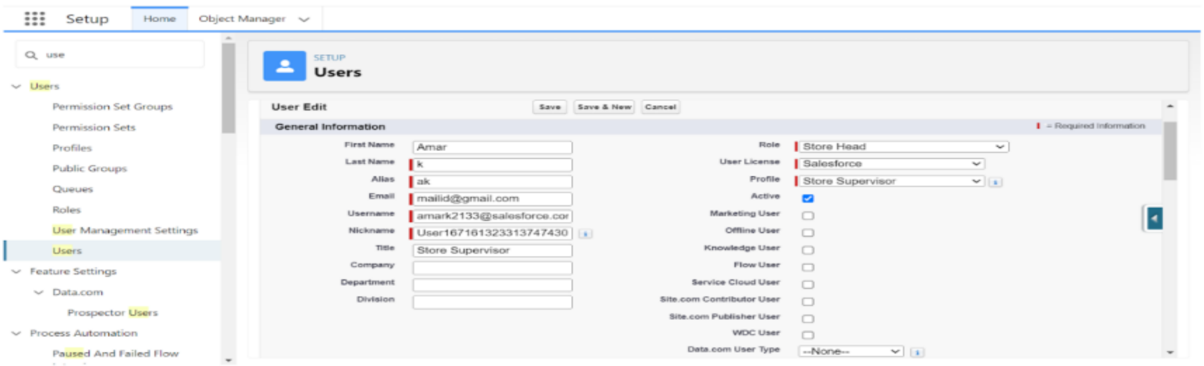
➤ **Task 7 : Creation of an User :**

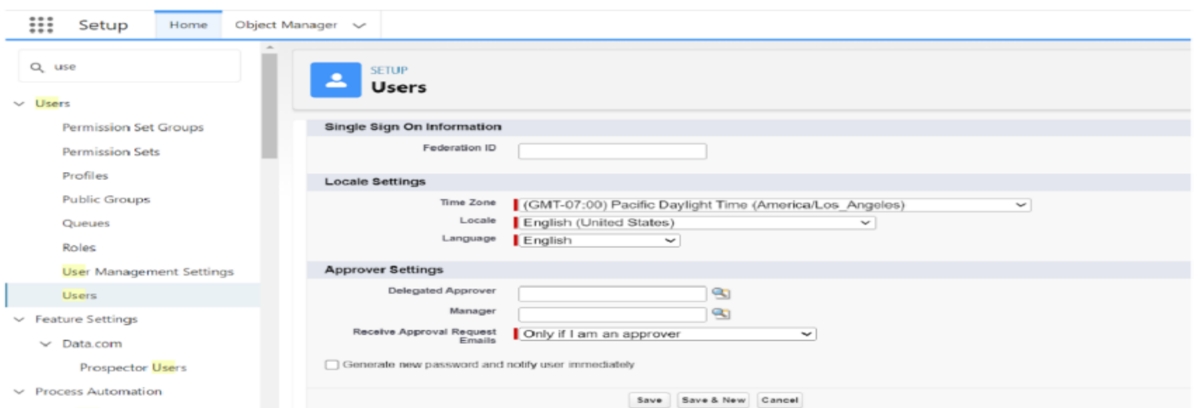
In Salesforce, a user represents an individual who has access to the Salesforce platform and its functionalities. Each user is assigned a unique username, and their access level and permissions are defined by their profile and role within the organization. Users can perform tasks such as managing records, running reports, and collaborating with team members based on their assigned permissions. Salesforce administrators configure user settings, including login credentials, security settings, and access to various features and data, ensuring that userscan efficiently and securely perform their job functions.

1. From Setup, in the Quick Find box, enter Users, and then select Users.
2. Click New User.
3. Enter the user's name Amar K and (Your) email address and a unique username in the form of an email address. Bydefault, the username is the same as the email address.
4. Select a Role(Store Head)
5. Select a User Licence As Salesforce.
6. Select a profile as Store Supervisor.

7. Check Generate a new password and notify the user immediately to have the user's login name and a temporarypassword emailed to your email.

Fill in the fields (first name, last name, alias, email id, username, nick name, role, user licence, profiles) --> save.





## ➤ <u>**Task 8 : Creating/Modifying Records :**</u>

Creating or modifying records in Salesforce involves navigating to the relevant object tab, clicking "New" to create a record or "Edit" to update an existing one. For creating records, users fill out the necessary fields andclick "Save" to store the new data. For modifications, users locate the record, make the desired changes in theeditable fields, and then click "Save" to apply the updates. This process ensures accurate and up-to-date information within the Salesforce system.

### Steps to Create a Record:

1. **Navigate to the Object Tab:**
   - Log in to Salesforce and go to the relevant object tab (e.g., Accounts, Contacts, Opportunities).
2. **Click "New":**

- On the object's home page or list view, click the "New" button to initiate the creation of a new record.

3. **Enter Record Information:**
   - Complete the fields in the record form with the required and optional data. This may include details likenames, addresses, dates, and other relevant information.
4. **Save the Record:**
   - Once all necessary information is entered, click "Save" to create and store the new record in Salesforce.

### Steps to Modify a Record:

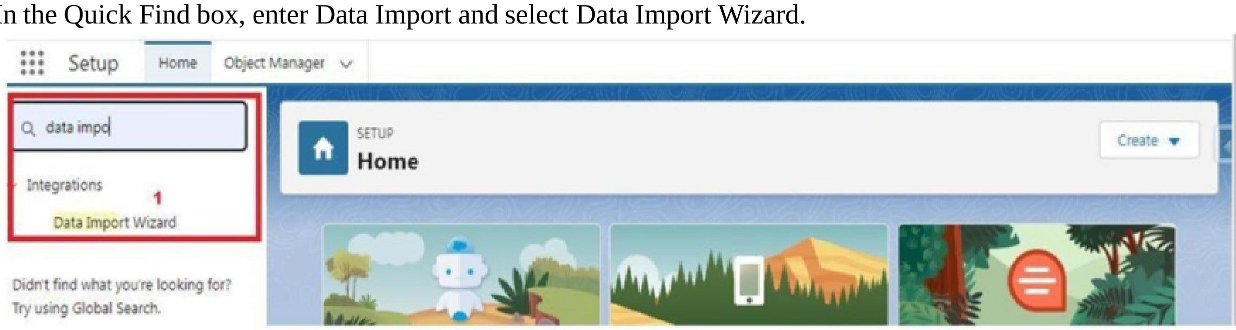
1. **Find the Record:**
   - Locate the record you want to modify by using the object's list view, search function, or related lists.
2. **Open the Record:**
   - Click on the record's name to open it and view its details.
3. **Click "Edit":**
   - In the record's detail view, click the "Edit" button to enable editing mode.
4. **Update Record Information:**
   - Make the necessary changes to the fields as required. Ensure all required fields are correctly filled out.
5. **Save the Changes:**
   - After making the updates, click "Save" to apply and store the modifications.

These steps ensure that records are properly created and updated, maintaining accurate and current data in Salesforce.

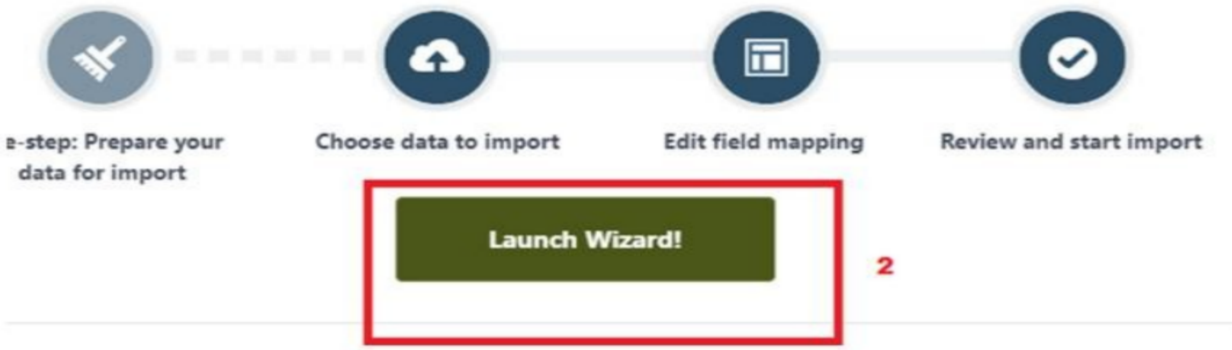
➤ **Task 9: Importing Data :**

Data Import Wizard—this tool, accessible through the Setup menu, lets you import data in common standardobjects, such as contacts, leads, accounts, as well as data in custom objects.

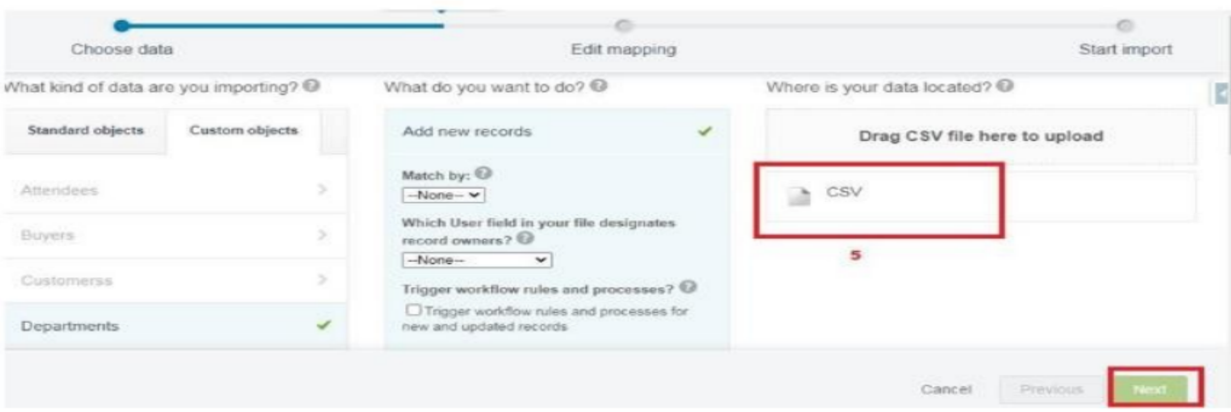
1. From Setup, click the Home tab.
2. In the Quick Find box, enter Data Import and select Data Import Wizard.



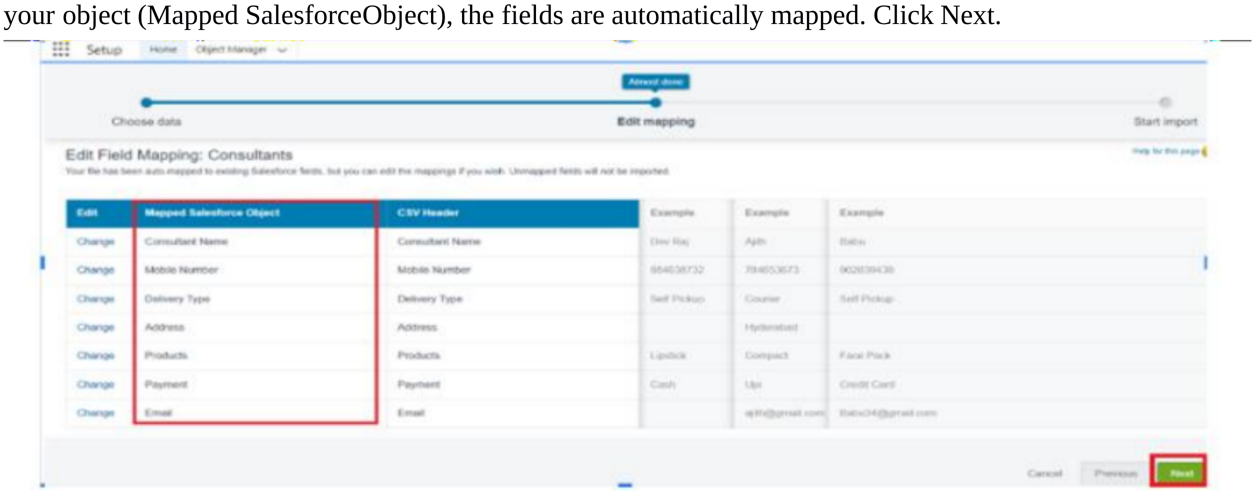
3. Click Launch Wizard!



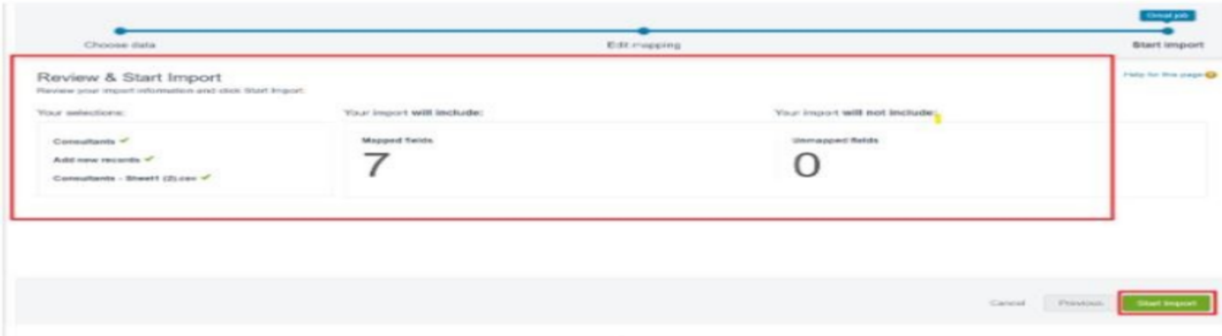
4. Click the Custom Objects tab and select the Consultant object.
5. Select Add new records.
6. Click CSV and choose file Consultant_CSV which we made earlier. Click Next.



7. Since the field names in the CSV file (CSV Header) are the same as the field names in your object (Mapped SalesforceObject), the fields are automatically mapped. Click Next.



8. The next screen gives you a summary of your data import. Click Start Import.



9. Click OK on the popup.
10. Scroll down the page and verify that your data has been imported under batches.
11. Ensure you have 0 records under the records failed column.

**Note -** Do Field mapping carefully.

➤ **<u>Task 10 :Accessing Reports :</u>**

<u>Creating Report</u> **:**

1.Click App Launcher

2.Select Urban Colour App

3.Click the reports tab

4.Click New Report.

5.Click the report type as Consultants Click Start report.

6.Customize your report, in Columns select - ConsultantName,Delivery type,Products,Payment.
